A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102/103

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 22-25, are rejected under 35 U.S.C. 102(b) as being anticipated by British Patent (1057264).

British Patent ('264) discloses a tubular film roll (see fig. 1) comprising a film tube that includes four side walls (front, back and two gussets).

The product-by-process claims are not limited to the manipulations of the recited steps, only the structure implied by the steps. See MPEP 2113. The product-by-process claims 22-25 results in no structure different from the British Patent ('264). The applicant is claiming the tubular film roll comprising film tube. Whether the film tube having four separated and individual side walls cut from a single film web and having four seams or the tube is made form a folded web results in no structure different from the British Patent.

Regarding claim 12, British Patent discloses that the walls are gusseted (see page 2, lines 128-1300).

Regarding claim 13, British Patent discloses that discloses that the front sides of the side-gusseted film tube lie over one another.

Regarding claim 14, British Patent discloses that the side gussets are staved toward the direction of the tube.

Claim 1 is rejected under 35 USC 103(a) as obvious over British Patent ('264).

British Patent discloses each and every structural element of the tubular film roll set forth in claim 22.

British Patent discloses that the tubular film roll is made of multi-wall, but is silent as to the method of molding. The claimed phrase "a film tube having four separate and individual side walls" means that the tube was made by a four webs, as explained in the instant application.

Kitao (6195964) discloses process for manufacturing a bag from polymer film material, having four walls (7, 9, fig. 3a), cutting the web into four film segments (7,9) and sealing the connected film segments so as to form at least one sealed end of the bag (fig. 3b). Note that cutting the web into four segments is inherent part of Kitao's method of making the bag. Kato discloses that that making tube from four different webs is a known alternative to the tube made form the folded web, or other forming methods.

Therefore, even if "tube form four webs" results in different structural characteristics of the end product than other forming methods, it still would have been prima facie obvious at the time the invention was made to use a "four separate webs" in

Art Unit: 3721

British Paten as claimed since Kato teaches that tube made from four separate webs is recognized as a useful technique for forming tube.

Allowable Subject Matter

4. Claims 1-7 and 10 are allowed.

Response to Arguments

5. Applicant's arguments filed 1/25/2010 have been fully considered but they are not persuasive. Applicant's arguments regarding claims 22-25, Examiner would like to reiterate that the claims 22-25 are product-by-process claims. The product by process claims are not limited to the manipulations of the recited steps, only the structure implied by the steps. See MPEP 2113. The product by process claims 22-25 results in no structure that is different, as explained in the rejection above, from the British Patent.

Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
